TITLE: Method of producing ceramics for cutting-tool bits and other parts

PERIODICAL: Referativnyy zhurnal, Mashinostroyeniye, no. 8, 1962, 14, abstract 8B93 P (Zakłady Mechaniczne w Łabędach. Pol'sk. pat. kl. 40 b, 2, no. 44249, 5.04.61)

TEXT: The method of producing ceramics for tool bits consists in that aluminum oxide powder is mixed with water, binders are added in the form of nitrates of silver, magnesium, cobalt, copper and others dissolved in water, and also molybdic and tungstic acid dissolved in ammonia, and silicic acid in the form of ordinary or colloidal solutions prepared in water or in other liquids in quantities up to 50% of the dry aluminum oxide powder weight. The solution obtained is dried while it is continuously stirred to ensure the crystallization of the finest particles of the binding additives. To precipitate the metal and the silicon carbides, the obtained product is roasted at 300 - 1,500°C. For final drying of the product and removal of the chemically bound water and gases (e.g. NO_2, SO_2, SO_3, Cl_2) it is, after a preliminary grinding and screening,

TITLE: Catalytic reforming of gasolines

PERIODICAL: Nafta, no. 6, 1960, 163-165

TEXT: The article which is the first of a serial explains the relationship between compression ratio, thermal efficiency of piston engines, and the need for high octane fuel; in addition, it presents a brief history of the reforming process and a breakdown of chemical reactions involved in catalytic reforming. Primary chemical reactions in catalytic reforming include: 1) dehydrogenation of naphthenes (cyclohexanes and their derivatives) into aromatic hydrocarbons, 2) dehydrocyclization of aliphatic paraffins into aromatics, 3) dehydroisomerization of 5-ring naphthenes into aromatics and 4) isomerization of straight-chain paraffins into iso-paraffins. Secondary reactions in catalytic reforming are cracking (which is desir-

AUTHOR: Wszelaczyński, Andrzej

TITLE: Comparison of efficiencies in regulating centrifugal compressors by throttling the air suction pipe, exhaust pipe and turning diffuser's vanes

PERIODICAL: Referativnyy zhurnal, Mekhanika, no. 9, 1962, 34, abstract 9B214 ("Arch. budowy maszyn", 1959, v. 6, no. 3, 381 - 405, Polish; Russian and English summaries)

TEXT: This is a design study carried out under a series of simplifying assumptions. Operation of a centrifugal compressor functioning under non-rated conditions is analyzed. Efficiency change is considered when a centrifugal compressor is regulated by throttling its air suction pipe, by throttling its exhaust pipe, and by means of turnable vanes of the vaned diffuser. The above-mentioned methods of regulation are intercompared.

TITLE: The "Tu" family [Tupolev aircraft]

SOURCE: Warsaw. Instytut lotnictwa. Biuletyn informacyjny, no. 10, 1966, 12-20

TOPIC TAGS: aircraft, bomber aircraft, support aircraft, passenger aircraft, transport aircraft, turboprop aircraft, turbojet aircraft, aircraft industry, aircraft engine, aeronautic personnel/ ANT-1 aircraft, Tu-144 aircraft

ABSTRACT: This article presents descriptions of the "Tu" aircraft series designed by A. N. Tupolev, from his ANT-1 to the Tu-144 aircraft. Basic data on each aircraft are presented, including information on engines, configurations, and the applications of various classes of aircraft. The role of this aircraft series during and after WW II is discussed, a partial biography of Academician A. N. Tupolev is given, and his associations with Aeronautical organizations and Soviet air sciences in general are discussed. The author points out that Designer Tupolev has many other plans in his bureau which might shortly appear in the sky.

the lignin plasification with the annexation of SO_2 takes place. The whiteness of the pulp is 60 to 64 G.E. and can be increased by 12 to 14 G.E., if bleached with H_2O_2. The advantages of the method are a great yield of HM and the possibility of utilizing wood of various species. The power consumption at defibrating decreases by 10 to 20% in the case of coniferous species, in the case of greenwood it is 550 to 700 kw-hours per 1 ton of pulp. Introduction of HC into the composition instead of wood pulp increases the mechanical strength of paper 2 to 3.3 times. Experimental production of newsprint with the addition of up to
